

# Overriding the Content Filter

## Unblocking a Website

The Districts Content Filter blocks potentially inappropriate and/or harmful content from being accessible on our network. Teacher login's have the ability to override the content filter in certain areas (such as YouTube which is categorized as audio-video). To override the content filter you must enter your Network ID (windows/email username and password). If you see the Blue screen with the 'blocked' message please login to gain access.

### Note :

If you are viewing an embedded video , you may not see a login screen or the 'Not You' link is not active (clickable). In this case open another tab and go to Youtube, enter your credentials here, when you go back to the original tab the content should be viewable (you may need to refresh page). You may also try this if a website that you are viewing looks distorted (all text is written down the left side of the page with no formatting).

If the website that your are viewing has a URL that starts with **https** and not **http** you must remove the s at the end of http to get the override screen.
